## SUMMARY

"As a Software Engineering student at RMIT University, I strongly believe that technology is the catalyst for turning the dream into reality. My current focus is on building a robust technical foundation by mastering Object-Oriented Programming (OOP), full-stack web development and deepening my understanding of complex algorithms."

## EDUCATION

### RMIT University

*Bachelor of Software Engineering — GPA: 3.3/4.0*

**Oct. 2024 – Oct. 2028 (Expected)**

*Ho Chi Minh City, Vietnam*

## TECHNICAL STACKS

### Frontend:

**Languages:** HTML, CSS

**Frameworks:** React, Next.js, Tailwind, Bootstrap, Redux, Zustand

### Backend:

**Languages:** Python, C/C++, Java, JavaScript

**Frameworks:** Express, JPA

**Databases:** Supabase, PostgreSQL, MongoDB

**API & Real-time:** WebSocket, REST API, FastAPI

**Tools:** Git, VSCode, Excel, Word, PowerPoint, Canva, Stitch

**Soft Skills:** Critical Thinking, Problem Solving, Team Collaboration, Time Management, Project Leadership

## PROJECTS

### Countdown – Deadline & Group Tracking App | *Solo Fullstack Developer* [GitHub Repo](#) | [Live Demo](#) | [Video](#) | **2026**

- A full-stack web app for tracking overlapping coursework and personal deadlines, with live countdowns and collaborative group tracking.
- Leveraged Claude Code as an AI pair-programming tool to independently architect and ship the entire full-stack system – from database schema design to authentication and deployment – in just **2 days**, reflecting strong adaptability in integrating AI-assisted workflows into professional-grade development.
- Directed and reviewed AI-assisted implementation of secure OAuth login, PostgreSQL Row Level Security policies for per-user data isolation, and serverless Supabase Edge Functions automating daily deadline digests via a custom Discord bot – applying sound architectural judgment throughout rather than relying on unreviewed AI output.

### FlowGuard – Flood Early Warning Platform | *Lead Developer*

[GitHub Repo](#) | [Video](#) | **2025**

- Led development of a real-time flood early-warning platform integrating IoT sensors, weather APIs, and tidal data using Next.js, Python, and Supabase, winning **1st place among 100+ teams nationwide**.

### TicTacToang | *Fullstack Developer*

[GitHub Repo](#) | [Live Demo](#) | **2026**

- Built a real-time multiplayer Tic-Tac-Toe web application with a React frontend and Node.js backend, implementing WebSocket-based communication to power live, synchronized online matches between players.
- Owned the project end-to-end across both frontend and backend, applying clean, modular architecture principles to keep the codebase scalable and maintainable.
- Deepened practical understanding of full-stack system design and professional software engineering practices, from real-time client-server communication to writing production-quality, well-structured code.

## HONORS & AWARDS

### RMIT Hack-A-Venture 2025 Champion

**2025**

- Championed an innovation hackathon by developing practical solutions addressing UN SDGs 6, 11, 12, and 13 to promote environmental conservation.

### Top 10% Naver AI Hackathon 2025

**2025**

- Ranked in the top 10% in a talent-acquisition hackathon by creating innovative AI-driven applications to streamline daily tasks and planning.

### IC3 Spark Competition 2016 Consolation Award #99

**2016**

- Earned international certification from Certiport for foundational computing skills, demonstrating an early passion for technology.

## LANGUAGES

**English:** IELTS 6.5 Overall — **Vietnamese:** Native.
